

Protecting Wisconsin Youth from HPV-related Cancers

HPV is a common **virus**.

Certain **types** of **HPV** are the major **CAUSES** of these cancers:

The **HPV** vaccine, recommended for **boys and girls**, can **REDUCE** the **risk of HPV-related** cancer.

HPV vaccination completion, for 13-17 year olds, in Wisconsin is **ALARMINGLY** low.

WE can protect our youth from **HPV-related cancer**.

Include HPV vaccine in routine vaccination recommendations for adolescents

Support a reminder system to improve vaccine series completion

Promote recommended HPV-related cancer screening

Together...Reducing the burden of **CANCER** in Wisconsin
